

Welcome Page

- This page displays a profile picture, my name, a navigation bar at the top and bottom, inside `<header>` and `<nav>`, all inside a `<div>`.
- The name and the picture are both inside a `<main>` each of them inside their own `<div>` and inside those divs is another `<section>` tag where the items are.
- Both navigation bars have a hover effect and lead either to the other pages or to my WhatsApp, E-mail or to this document you are reading right now. They stay visible on each page.
- The body holds a background picture, grey with white stripes
- I aligned them in CSS by using `float: left` and `float: right`

About Me

- Similar to the welcome page, the text and the pictures are inside a <main>, each of them split into two <div> and each <div> holding a <section> tag
- You can zoom out the pictures by hovering over them
- The CSS attributes are shared with the ones from the welcome page by assigning the same IDs (#rightside, #myname)
- Putting everything in a flex, with flexwrap: wrap improves the responsiveness

About me My CV Gallery
Contact

Who am I?

My name is Yassine Dhaou. I was originally born in Sidi Bennour, Tunisia and grew up in Austria, Sankt Poelten. My hobbies are playing basketball, hitting the gym and gaming whenever I get the chance. After high school, I did a stint in the military, but it wasn't very fulfilling for me, so I left and tried out a bunch of different jobs. Now, I'm diving into informatics at the University of Applied Sciences in Krems (IMC), working towards my bachelors. I'm especially curious about cybersecurity and hope to build a career in that field one day. Always up for a challenge, learning new things and staying busy - whether on the court, at the gym or behind a screen.

CV Page

- The cv was created in a way, where I have a sidebar left and each of them open up a slide to display content
- The slides where hidden with the “display: none” attribute in CSS
- Each button on the sidebar is an anchor tag that leads to the content “slide”, referred to each slide with an own ID (#slide1content)
- The sidebar being nested inside an `<aside>` tag, and the content in the `<main>`, all the buttons are in an unordered list
- Most of the data inside the slides is aligned through a `<table>` like a CV document

Gallery

- The entire content is inside a `<main>` tag and inside another `<section>`
- The pictures of each artist are in an unordered list, each in their `` tag
- With the “`display: grid;` and `grid-template-columns: repeat(2, 1fr);`” attribute in CSS, I was able to split it into two columns
- Each picture has its own description

Contact Form

- The contact form is inside a `<main>` tag and that main holds a `<div>` with the `id="form"` attribute
- Inside it, I have the description and title with an `<h1>` and `<h4>` tag, two input tags and one textarea, with a button in the end
- I didn't label the form elements, but instead gave them a placeholder
- Removed the borders and only giving a bottom border with no label, and a `:focus` attribute with CSS that changes to border color to white, for a more minimalistic look

The screenshot shows a contact form page. At the top, there's a dark blue header bar with three items: "About me", "My CV", and "Gallery". Below this is a red bar containing the word "Contact". The main content area has a light blue background. It features a section titled "Get in touch" with a sub-instruction: "Whether you have a question, want to start a project or want to connect. Feel free to send a message in the contact form.". Below this are three input fields labeled "Your Name", "Your Mail", and "Your Message", each with a corresponding placeholder text. At the bottom right is a "Send" button. At the very bottom of the page is a dark blue footer bar with links: "Home" (with a double vertical bar), "WhatsApp: +43 676 416 78 35", "Email: yassine183024@gmail.com" (with a double vertical bar), and "Documentation.pdf".

Used resources for creating this website were w3schools, Stack Overflow, Reddit,
freecodecamp and CSS Battle
